

# RAND Boats

– sustainable luxury at sea

## EXPERIENCE TRUE LUXURY AT SEA WITH A CLEAR CONSCIENCE WITH RAND BOATS' NEW PICNIC SPORT MOTORBOAT

Produced in a simple and clean Scandinavian design, the new picnic boats from RAND Boats break with traditional motorboats and offer an easy way to experience the sea in a luxurious manner.

The Picnic boats are designed to provide the most luxurious boating experience within its physical confinements. Only five meters long among its merits are the spacious seating rows seating up to 10, a press-and-release stainless steel bathing ladder, and a 2,5 m<sup>2</sup> convertible sun lounge for easy tanning or a relaxing nap in the breeze.

Overall RAND Boats sets its ambitions for sustainable boating high and have aside from its re-cycled building materials, electric engine, and solar options recently initiated a research collaboration with innovative solar cell producer, Black Silicon Solar, on a project expected to take transportable solar power to the next level by turning every inch of the boats' surface into one big solar cell.

RAND boats is committed to the promotion of environmental awareness in the high-end boating industry, and aims at providing the perfect mix of design, functionality and sustainable luxury.
